1 .

```
final class Student {  
    class Undergraduate extends Student{}  
  
    final int marks = 100;  
  
    final void display() {  
        System.out.println("The value of marks is: " + marks);  
    }  
}
```

2.

```
abstract class Shape {  
  
    protected double length;  
    protected double breadth;  
  
    public Shape(double length, double breadth) {  
        this.length = length;  
        this.breadth = breadth;  
    }  
}
```

```
abstract double calculateArea();
```

```
public void display() {  
    System.out.println("The length of the shape is: " + length);  
    System.out.println("The breadth of the shape is: " + breadth);  
    System.out.println("The area of the shape is: " + calculateArea());  
}  
}
```

```
class Rectangle extends Shape {
```

```
    public Rectangle(double length, double breadth) {  
        super(length, breadth);  
    }
```

```
    @Override  
    double calculateArea() {  
        return length * breadth;  
    }  
}
```

```
